Quality Assurance Engineer – Entry Level

PowerCloud Systems is the world's leading online software platform provider for enabling Networking as a Service (NaaS), and we're looking for talented, passionate team members to help us build our next-generation networking solutions. With our CloudCommand technology platform, we're transforming the networking industry by making equipment and resources dramatically easier to deploy, configure, secure and manage. PowerCloud Systems is a spin-out from PARC based in Palo Alto, CA and funded by Walden Venture Capital, Javelin Venture Partners and Qualcomm Ventures. This is a unique opportunity to join a brilliant, fast growing and well-funded start-up, while leveraging the research and innovation exposure of PARC.

We are actively seeking a Quality Assurance Engineer testing web based applications and networking based services. This position works closely with software developers and senior QA engineers to understand product specifications and enhance test plans and test cases to support releases and manually execute tests with future automation opportunities.

Requirements:

- Passionate about testing networking based services and products that are well regarded for their quality, scale and stability
- Passionate working on high availability and large scale applications in a fast-paced engineering environment
- Ability to create and maintain test plans and test cases
- Ability to execute test cases, identify issues and perform root cause analysis to debug problems in design and/or implementation
- Experience working on Ubuntu or Debian Linux environments
- Knowledge in testing, installing and monitoring computer programs, software and systems
- Advanced degree in Computer Science or related field

Desired traits:

- Excellent troubleshooting, problem solving and analytical skills
- Proven ability to be creative and resourceful in a fast-paced, entrepreneurial environment
- Comfortable working on multiple projects simultaneously
- React well and quickly to frequent project demands and requirement changes
- Strong written and communication skills and enjoy working in a start-up environment

Desired skills:

- Understanding of web and networking technologies on both server side and client side, programming and scripting experience (Python is a plus)
- Proficiency in MySQL.
